SUMMIT SCRIPTING TOOLKIT

THE NEXT GENERATION OF WORKFLOW AUTOMATION

The Summit Scripting Toolkit (SST) is the most powerful Robotic Process Automation (RPA) platform available in healthcare and sets the standard for the next generation of workflow automation software. Any user, from the most experienced programmer to the analyst or department head can easily build workflows and interfaces in a matter of hours rather than days or weeks.

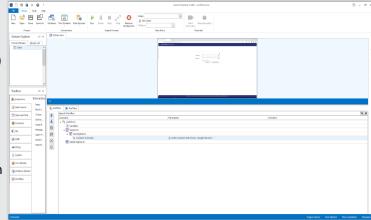

The most intuitive Robotic Process
Automation technology available
in healthcare

PRODUCT DETAILS - FEATURES & BENEFITS

- Immediate ROI Automating redundant tasks generates instantaneous cost savings and workload reductions.
- Eliminate the cost of custom interfaces Create your own interfaces, avoiding customizing and maintenance fees.
- Heightened reliability of workflows Incorporates a non- positional approach to data collecting that is unique to SST.
- Robust troubleshooting Alerts and schedule logging functionality can be received at anytime.
- Simply defined workflow segments Identification is simplified using the Summit Workflow Builder.
- **Rules-based and procedural processes** SST is the only tool where both types of automation can be used together.
- Summit Script Recorder Navigate through applications and quickly record keystrokes during building sessions.
- Workflows are saved as XML definitions Avoid compiling automations, enabling swift deployment of processes.
- **100% reusable workflow segments** SST enables all segments to be reused, simplifying the workflow building process for future automations.
- **All user types** Multiple programming environments to build sophisticated workflows using simple script tags, or any language that can support the .NET framework (VB.NET,C#).

The Summit Scripting
Toolkit can connect to
virtually any system
including but not
limited to:

- All major Healthcare
 Information Systems
 (Meditech, Cerner, Epic, etc.)
- Complex or proprietary Windows or Web-based applications
- Citrix or any other type of remote-hosted application using advanced OCR technology

ENTERPRISE DASHBOARD INTEGRATION

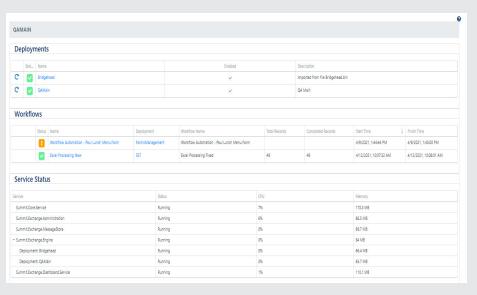

SUMMIT HEALTHCARE HAS BEEN OFFERING **RPA SOLUTIONS** FOR OVER 20 YEARS, **EXCLUSIVELY TO THE HEALTHCARE** MARKET.

Latest Enhancements:

- Enhanced OCR technology -Easier, faster and more reliable to automate those complex workflows.
- Advanced Encryption All workflows and log files are encrypted to make sure PHI is never compromised.
- Integration with the Summit Exchange engine and web platforms for full enterprise monitoring and management.

Automating tasks in the financial, clinical, payroll, revenue cycle, and other administrative departments of the hospital can save time and money by eliminating manual data entry, and boosting productivity to maximize your resources.

RPA not only improves business processes, expenses, and productivity, but it does it in a fraction of the time it would take staff and mitigates human error.

Many organizations have success utilizing RPA for assisting with fluctuations in workloads, and better re-allocating their staff resulting in higher employee satisfaction and alleviating burnout.

From the simplest workflow to the most complex interface, SST provides a cost-effective solution that enables you to extract or input data from any system, create real-time or batch interfaces, and automate routine data entry tasks.

The Summit Scripting Toolkit provides a full-featured, proven automation environment complete with all the advanced tools necessary to build, test and deploy intelligent workflows from a single desktop application.

About Summit Healthcare

Summit Healthcare is the choice of hospitals and providers who want to take full control of their healthcare system integration, automation and business continuity needs. Since 1999, we have worked to provide the industry with the most flexible integration and automation technology with complimentary tailored services and solutions.
