SummitHEALTHCARE

DATA AVAILABILITY ANYTIME, ANYWHERE

SUMMIT ALL ACCESS FOR COMMUNITY

On Demand Patient Data for the Care Community

Incomplete data puts patient care and hospital operations at risk. However, most solutions do not display documents in a way that is practical and readily accessible to staff across the healthcare spectrum.

Organizations are looking for ways to quickly and securely distribute data *regardless of access to a desktop computer, network, or EHR.*

Improved Communication Supports Transitions of Care

IT STAFF

- Low cost integration with your community
- Secure Data availability with your providers
- Easy 1-click sign up for community providers
- Share meaningful patient information from any system

HIM STAFF

- No delays in getting providers information
- Labor free processing of patient records to providers
- Reduce paper transaction costs from faxing & mailing
- Auditing of user events mitigate any security risk

PROVIDERS

- Improve patient care with direct access to patient hospital data
- Notifications when providers want and need them
- Support care collaboration through electronic consults
- Increase reimbursement opportunities through early intervention

Summit Healthcare's All Access solutions allows you to quickly and easily share timely information to providers when it's needed to improve patient outcomes and care continuity. Information sharing can be combined with notifications for providers, who want to be updated regularly on patient events they care about. Value-based care delivery requires physicians and providers to monitor patients throughout the continuum of care, not simply when they're in the practice for a scheduled appointment.

PRODUCT DETAILS

ENHANCED PATIENT CARE FOR YOUR COMMUNITY

SummitHEALTHCARE

Summit All Access is the one-stop-shop for strategically managing data access throughout the healthcare enterprise. Securely distribute documents within the organization or grant audited access to documents for community providers.

Become a leader in healthcare technology by incorporating the latest tools, data standards, and supporting technologies to accomplish cost-effective innovation in healthcare.

Convenience Access to Data

- Instantly expand your solution to new departments and facilities by granting access to the web portal.
- Intuitive web views make workflows more streamlined for staff and community providers.
- No additional hardware or software for staff or community providers to install.

Secure and Fully Auditable

- All processed data is automatically encrypted to HIPAA standards.
- Export comprehensive user audit logs of who, when, why, and how any document is viewed or printed.
- Install the solution off-site or in your chosen cloud environment as an additional backup for data access and cyber security protection.

Easy to Scale and Manage

- Easy to Scale and Manage
- Leverage real-time HL7 feeds, PDF reports, and other standards to power your enterprise-wide innovations.
- Add new users through Active Directory or through one- click sign-up via the web.
- Support your IT staff's on-the-go needs with email alerts and mobile device remote monitoring tools.
- Produce system reports to analyze performance and efficiency trends throughout your entire system.

ROI: Cost Savings

- Free up FTEs by using scheduling tools to automate manual tasks.
- Leverage on-demand access to data to reduce preventable readmissions and improve outcomes.
- Reduce paper transaction costs from faxing and mailing.
